

PROG: HAW I
MOD NAME: INTRO MOBILE
APP

MOD CODE: IMAD 5112
DATE: 10 JUNE 2026

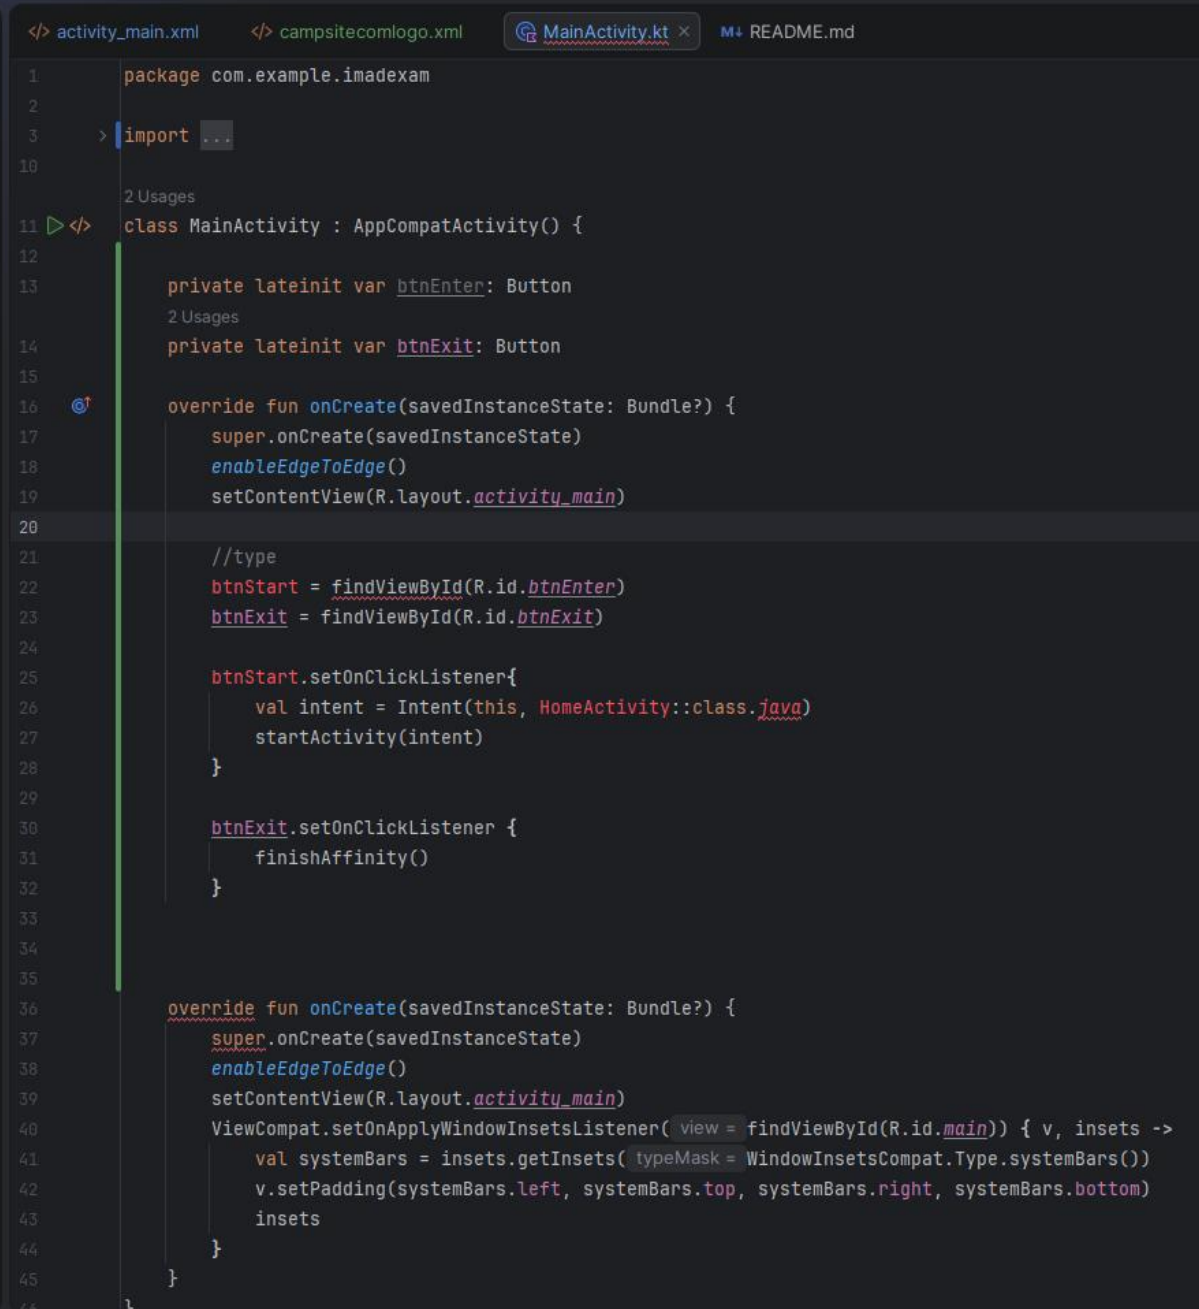

STUDENT ID: ST10537135

ERROR HANDLING

- I had trouble putting in this image file so I swapped it with a jpg instead and that fixed it ,simple correction

- Typing problems and mis labeling simple fix just going back and re labeling most variables and typecasting

Coding this app was much harder then I actually thought it was, I had a lot of problems with GitHub at the start and took me around 3 hours to fix but I still fixed it in the end and got to working.

I began with a simple cover page to exit the app and enter into the main scene of the app.

From then I did the main scene code and set up the system to add gear ,go into dark mode ,look at the list of items and go into the detail scene for more information.

I also made the splash scene to make the background for the app and a loading scene to go inbetween scenes.

Finally I did the detail scene with the total list of items ,a return button and a box of recemmandations for any faults in gear or a well done message f everything is in place.
